

Transcript 2

Hi everyone and welcome to Week 1 of Security and Risk Management in a Digital Environment. During this first week, we will evaluate the importance of security and risk management. We will start the week with a lecture on the background to the subject and why it is needed, to enable you to gain an understanding of the importance of identifying the risks and threats, and put into context the role of management in this discipline.

We will also have a lecture (slides with voiceover) on Cybercrime to give an insight into the reasons why security and risk management are an essential element in any organisation, as well as preventing risks for individuals in a variety of settings.

There will be a TED talks on Cybercrime and papers to read in order to gain a deeper understanding of the subject area.

I will also be asking you to share with fellow students what experience you have of problems with risk and security both within your organisation and your personal life. This is to enable you to discuss your understanding of the importance of strategies to manage risks and threats, and the possible impact they might have.

Please ensure that you engage with these discussions as they will further your understanding of the weeks' content and can contribute as useful information to add to your portfolio for the summative assessments. Please keep this portfolio updated as you will benefit from it and read the summative assignment specifications regularly in order to ensure you record all the relevant information in the portfolios.

Please complete all of the activities for the week and enjoy the module.
